

PRESS RELEASE

July 30, 2024

River Island Territory One Unsafe Water Alert Canceled

As of July 29, 2024, Del Oro Water is pleased to report that the water being distributed throughout the system passed bacteriological and nitrate testing and that it is **no longer necessary to use bottled water for drinking and cooking**. Therefore, there will be no further scheduled pickups for bottled water at this time.

The State Water Resources Control Board – Department of Drinking Water received a copy of all lab work conducted and verified the results and approved the cancellation.

The treatment plant is continuing to ramp up production gradually. This phased approach is allowing us to carefully monitor and adjust operations to meet both regulatory standards and community needs effectively. Due to the gradual phased in approach, Stage 5 Conservation is required to remain in effect and your continued efforts are still needed.
